

Lifecycle Management Program

OPTIMIZING REVENUE. REDUCING COSTS. MANAGING RISKS.

The Lifecycle Management Program is designed for senior financial executives seeking to save an estimated 18% - 27% of their total information technology costs over a 36 month life cycle. Our methodologies allow us to examine your business and determine a technology life cycle program that satisfies your goals. Through our program, we will lower your total cost of ownership and create an environment that is more productive. Our Lifecycle Management Program includes procurement, deployment, support, and technology retirement.

The AME Group has 24 years experience as technology lifecycle management specialists. Our best practices and award winning life cycle management program will make your business more efficient and effective.

Benefits of the Lifecycle Management Program:

- One contact for your procurement, deployment, support and technology retirement
- Reduces procurement-to-deployment cycle time through our best practices
- Increases your end-user productivity via on-site support and remote manageability
- Ensures system compatibility and continuity through standardization of technology
- Reduces your service requests through current technology
- Asset Management via monthly reporting
- Training for your staff on their new business technology tools
- Reduces ownership of obsolete equipment

Gartner analysts recommend a life cycle of three years or less for high-performance users and a four-year desktop life cycle for mainstream knowledge workers.
